

AOBE WORKTRACK

User Guide

Start work, record breaks and trips, create reports, and protect your records.

Local and private

No account, tracking, cloud database, API key, or internet connection is required for ordinary use.

Start in under a minute

Open Aobe WorkTrack. Enter your name or choose **Skip Setup and Start Tracking**. Rates and other defaults are optional and can be added later in Settings.

The Today page shows only actions that make sense now. If nothing is active, Start work and Start trip are visible. If work is running, the live timer and break/end actions replace them.

Record a normal workday

- Choose **Start work**. Add an optional job, location, rate, tags, or note, then confirm.
- Choose **Start break**, name it, and select paid or unpaid.
- Choose **End break** when you return.
- Choose **End work** when the shift finishes.

Timer recovery

The app stores real start timestamps. Minimizing, refreshing, sleeping, losing internet, or restarting does not reset active work or trips.

Manual hours and corrections

Use **Add manual entry**, or Quick Add and **Completed shift**. Enter start/end times or leave both blank and enter a duration. Work ending after midnight uses the next calendar date. History's pencil button edits saved records.

Unusual overlaps, decreasing odometers, missing trip purpose, and long entries produce a clear warning. Valid unusual work can be kept after review.

Mileage

Add a vehicle when you want odometer checks and automatic current-odometer updates. A profile is helpful, not required.

- Choose **Start trip** and add a purpose, category, vehicle/job, and optional starting odometer/location.
- At the destination, choose **End trip**.

- Enter the ending odometer or direct distance. Add destination, tolls, parking, and notes if useful.
- Only Business is included in mileage reimbursement estimates by default. Commuting and personal trips are never silently classified as business.

Calendar and History

Calendar shows hours and trip indicators in a month grid. Select a date to read that day's records. History searches jobs, purposes, destinations, notes, and tags; it can sort by date, hours, distance, or amount.

The trash button moves a shift or trip to Recently Deleted and briefly offers Undo. Recently Deleted supports restoration and carefully confirmed permanent removal.

Reports

- Choose Today, a week, month, pay period, year, or custom date range.
- Turn detail sections and the signature line on or off.
- Use PDF for a finished document, XLSX for separate typed worksheets, CSV for plain data, or printable HTML for any browser.
- Every amount is labeled as an estimate. The app is not payroll, tax, or legal software.

Backups

Open **Settings > Backup & import** and choose **Back Up Now**. Keep the downloaded JSON somewhere outside the device/browser profile. To restore, choose the file, review counts, and confirm. Integrity and structure are checked before any change, and a local safety snapshot is created first.

Important for web/PWA use

Browser data is not cloud-synced. Clearing site data can erase records. Desktop and web records stay separate unless you move a complete backup between them.

Accessibility and privacy

- Ctrl+N opens Quick Add on desktop. Essential workflows support keyboard navigation and visible focus.
- Choose system, light, or dark mode; high contrast; text size; and reduced motion.
- Notifications are optional. Denial does not reduce tracking accuracy.
- Version 1.0 does not collect GPS. Use odometer or direct distance offline.
- No analytics, ads, account, or telemetry is included.

Need a safe practice?

Back up before large imports, restoring old data, changing computers, or clearing a browser. Keep at least one recent backup that is not stored only on the same device.

Tax and reimbursement treatment varies. Aobe WorkTrack records information but does not provide tax or legal advice.
